

Test Adding More Plots:

1. Open a new app instance
2. Create a new account to ensure the user's database is empty
3. Login to the app with the newly created account
4. Click add plot without importing any data first
 - a. An error message should pop up indicating there is no data to visualize
(Acceptance Criteria #1)
5. Import data and click add plot. Select data types of your choice and add a plot
 - a. A new plot should show up that represents the data selected
6. Check the debug console for print statements that show the data printed to the console when the data was imported to verify that the plots represent the data (Acceptance Criteria #5)
7. Add 5 more plots to the page in the same way as before. Then attempt to add a 7th plot.
 - a. An error should pop up showing that the max number of plots is 6 (Acceptance Criteria #2)
8. Press the delete button to delete a plot and then select a plot to be deleted.
 - a. The selected plot should disappear from the homepage (Acceptance Criteria #3)
9. Press the export JPEG button to export rendered plots.
 - a. There should be the same number of JPEG files on the desktop as there are plots on the homepage
10. Press the export PDF button to export rendered plots.
 - a. There should be a single PDF with the same number of pages as there are plots on the homepage (Acceptance Criteria #6)
11. Now delete all of the remaining plots. Press the delete button when there are no rendered plots.
 - a. An error should pop up indicating that there are no plots to delete (Acceptance Criteria #4)
12. With no rendered plots, try to export as PDF and JPEG.
 - a. An error should pop up indicating that there are no plots to export (Acceptance Criteria #7)
